

CHIROPRACTIC SHOWCASE

Your Body is 70% Water.

Pure Water Systems for Health & Wellness

Pure Water Systems was founded as a distributorship in 1985. Today, we manufacture the most advanced point-of-use water purification systems available. PWS™ products are designed to produce drinking water that meets the rigorous Vincent (BEV) standards for purity and biocompatibility.

Pure Water Systems recognizes hydration's vital role in wellness. A significant percentage of the population suffers mild, chronic dehydration, which manifests in an amazing constellation of symptoms including back pain, headaches, and high blood pressure to name just a few. However, hydrating with water that is contaminated with chemicals, heavy metals and other pollutants may actually contribute to or exacerbate a patient's disease state.

Both our countertop and undersink models combine the most effective technologies that work together to remove all classes of contaminants such as salts, nitrates, lead, arsenic, mercury, MTBE, pesticides, chlorine, fluoride, and disease causing waterborne microorganisms commonly found in tap, well, bottled, and many filtered waters. The PWS™ BEV-Series systems produce 100% pure drinking water that works in harmony with the body's natural chemistry, encouraging the optimal conditions for healing and overall wellness.

At Pure Water Systems, we do not follow fads, but instead base product development on sound scientific principles. Our exceptional designs are the result of knowledge, scientific insight, and laboratory research gained over the past twenty years. We create products for people who are serious about improving their health and quality of life, who trust nature holds the keys to real health, and who form relationships with companies they can trust.

PWS™ BEV-Series systems are available exclusively through licensed health care providers, or direct from the company in Redmond, Washington. Distribution opportunities are available.
